

SOUND BREAK™

Acoustic Insulation

Soundbreak™ in Serene Green: Embracing Tranquility

At Fletcher Insulation, we are committed to enhancing the quality of life in homes and low-rise multi-residential spaces with our high-performance Soundbreak™ acoustic batts. We recognise that noise, whether from external sources or within, can significantly impact health, wellbeing, and overall enjoyment.

To bring focus to the Soundbreak™ experience wherever it is installed, we have replaced our familiar pink hue with a unique Soundbreak™ colour: Serene Green. This new colour, specially crafted by Fletcher Insulation, is designed to evoke the tranquility found in nature.

Rest assured, the performance of Soundbreak™ acoustic batts remains steadfast. The packaging has been updated and the codes for the green product will remain unchanged so you can easily identify Soundbreak™ from other Fletcher Insulation products.

Soundbreak™ provides superior acoustic control in residential wall, ceiling and intra floor applications. Soundbreak™ can help reduce the sound transfer of noise from outside the home inside or from adjacent rooms. It is the ideal solution for interior walls in theatre rooms, and provides sound absorption in walls between bathrooms and noisy living areas.

Soundbreak™ production will continue to utilise the same Pink® technology in the process. The only changes are what you can see, the colour of the batt and the colour of the packaging.
