PINK
BATTS
Comfort for life™

Creating healthy, comfortable, energy efficient living

With both temperatures and energy bills rising, there isn't a home in Australia that wouldn't benefit from improved insulation. Pink® Batts are a glasswool batt made using organic binder that is safe to use and rigid, yet soft to handle. Being more rigid to handle, Pink® Batts installation is a breeze. Once installed, they stay firmly in place, which is important, because a gap of only 5% can result in up to a 20% drop in thermal performance.

What's behind your wall matters. Don't compromise on safety or comfort. Choose Pink® Batts and use this guide to select the right batt for your home. Pink® Batts will then be your unseen hero.

Why **Pink®** Batts?

Energy efficiency

With Pink® Batts throughout your home, your cooling and heating systems will work more efficiently and be cheaper to run. As you save money, you'll be doing your bit to help save the environment too.

A more comfortable home

Whether you are renovating or building a new home, Pink® Batts can help keep your home cooler in summer, warmer in winter, and more comfortable all year round.

Peace and quiet

Pink® Soundbreak® can significantly cut down the noise that enters your home from outside, as well as reduce the unwanted noise between rooms and floors inside.

Fire safe

Pink® Batts are non-combustible. In fact, they are so good at resisting fire that they can help protect both your home and your family by delaying the spread of the fire.

Easy DIY installation

Pink® Batts are designed to be firm, yet comfortable to handle, so cutting and installation isn't difficult. Plus, when they are fitted, they hold in place, so you can be confident that the insulation you install will perform better for longer.

Lifetime Warranty

Fletcher Insulation do not compromise on quality. For your peace-of-mind, we guarantee all Pink® Batts products with a lifetime homeowner warranty.

Made from recycled material

Pink® Batts are bio-soluble, manufactured from up to 80% recycled materials, and specifically designed for our harsh Australian conditions.

Made in Australia

Pink®Batts have been made in Australia since the 1950's. In that time, they have been used in millions of homes, and thousands of architecturally significant buildings to help improve energy efficiency and comfort.

Choosing the right Pink[®] insulation

Choosing the right type of Pink[®] insulation for your project isn't rocket science, but you will have to make some decisions. To help, we've provided this step-by-step guide below and detailed tables on the following pages. Answer our 5 questions and you'll be able to choose the right Pink[®] as quick as a wink!

1 Where are you insulating?
We've tailored our Pink[®] Insulation range so it's just right for every part of your home. We have specific insulation products made for walls, ceilings, and floors.

2 What do you want your insulation to do?
Are you looking for insulation to keep your home warmer in winter and cooler in summer? Or is your main goal to cut down the noise from outside or between the walls in your home?

3 What's the frame of your home made of?
Most Australian homes are made of either steel or timber frames. We have 600mm wide batts for steel frames and 430mm and 580mm wide batts to suit timber framed homes. We always recommend measuring your frame carefully. Choosing the right Pink[®] insulation means it fits snugly with no cutting, saving you time and money.

4 Which R-value do you need?
An R-Value tells you how well an insulation material resists the transfer of heat. It's based on the insulation type, its thickness, and its density. Typically, the thicker the insulation, the higher the R-Value, and the better the batt is at keeping you warmer when it's cold and cooler when the weather heats up. Choosing the best insulation with the right R-Value will often depend on your local climate.

Example of Pink[®] Ceiling Batt R-values and thicknesses

5 How much space do you need to insulate?
Simply measure the area to be insulated in square metres. Then, check the tables on the following pages or the batt pack label to see how many packs you need. To make it easy for you, we've taken into account the area taken up by framing.

If in doubt, check the label out

You'll find lots of important information displayed on the front of our brand new packaging.

The icons identify the main benefits of the batts. The label lets you know how many batts are in the pack, their R-Value, the dimensions of the batts, the weight of the pack and the coverage you can expect from each pack.
